

Overview

At PCF we have always believed that a picture paints a thousand words. And it's never been truer than today, when management are at risk of being swamped by the volume of data produced within the organisation, and tight deadlines put constant pressure on the time available to spot potential problems.

The company can trace its history back to the early 1980s, when (as EuroLog Systems) it developed a "CAD system for projects", the world's first interactive graphical project management tool. For the first time, users were able to visualise their projects in a form that they were comfortable with, and could immediately spot errors by looking at a picture, rather than by poring over columns of data.

For over 20 years, we have enabled our customers to maximise the value of their investment in existing IT systems by generating meaningful information from the raw data that they generate. We specialise in the delivery of interactive graphical solutions that provide a rapid return on investment, allowing clients to gain a deeper insight into their business and to visually explore alternative solutions to their problems.

PCF is totally committed to addressing the needs of organisations managing large projects. Our customers are drawn from a wide variety of sectors, including

- Aerospace and Defence
- Manufacturing and Production
- Engineering and Construction
- Pharmaceuticals
- Oil and Gas
- Local and Central Government
- Telecommunications

Across the customer base our software is used in many diverse applications, but the common theme is solving problems using our unique interactive graphical approach: Visualisation is the key.

Customers

Our current customers include:

- Westland Helicopters
- Network Rail
- Mercedes-Ilmor Engineering
- BAE Systems
- Crossrail
- AWE
- Leighton Kumagai Joint Venture
- Channel Tunnel Rail Link
- Scandinavian Airlines
- National Oilwell Varco
- Rolls-Royce Marine Power
- Strategic Rail Authority
- Lockheed Martin UK Insys
- Laing O'Rourke
- Mott MacDonald
- RZD (Russian Railways)

Products

Due to the flexibility of our software and the wide applicability of our approach, our systems have often also been used in areas outside traditional project management, including:

- Treasury Management
- Enterprise Resource Planning
- Maintenance Management
- Capacity Planning

In these environments the rich graphics, high performance database and “what if” modelling capabilities of our tools perfectly complement the strengths of existing business systems.

We currently offer customers two products:

OEI Exec is a modular system designed for organisations managing complex projects. Common problems facing such organisations include accurate communication of performance to management or stakeholders, identification of opportunities for process improvement, and matching resources to demand.

Unlike traditional project or maintenance management systems based primarily on Gantt charts, OEI Exec uses CAD technology and a high performance database to allow you to visualise key planning data as simple pictures, perform “what if” modelling on information extracted from operational systems, and automate the production of business-specific management charts.

LinearPlus provides an “out of the box” solution for creating and editing time chainage diagrams. Suitable for any linear project, the system allows users to rapidly create diagrams from data held in planning systems, perform “what-if” analysis and export the changes. Diagrams can be annotated with a wide variety of graphics, including site plans or custom symbols imported from CAD systems.

Designed from the outset to interface to other systems, all our software is simple to deploy, has a very small footprint, and makes efficient use of system resources. For OEI Exec based solutions, the flexibility offered by the built in application development language means that any further customisation required is straightforward and results in rapid delivery of a totally bespoke solution.

Contact Details

PCF has been a Primavera Technology Partner since 2003, and is currently building a network of local representatives around the world. Please contact us for details of your nearest representative.
