

ORACLE PROJECT PORTFOLIO MANAGEMENT INTEGRATION PACK FOR PRIMAVERA P6 AND JD EDWARDS ENTERPRISEONE

THE FIRST TRUE ENTERPRISE PPM SOLUTION

FEATURES

- Create your projects in Primavera or Oracle JD Edwards EnterpriseOne
- Integrate Financial Plans or Workplans
- Synchronize global calendars, resources and rates between applications
- Capture actual costs in Oracle and send to Primavera
- Bring timesheets from Primavera into JD Edwards EnterpriseOne to pay employees and for project costing
- Configure synchronization to run when you choose

BENEFITS

- Flexible setup options allows you to match integration to your business needs
- Automated synchronization eliminates manual intervention
- Reduce project risk by having everyone using the same data
- Align project schedules with procurement schedules for greater cash flow management
- Support by Oracle means future proof upgrades
- Lower Total Cost of Ownership over time

Leveraging Oracle’s Application Integration Architecture, the Oracle Project Portfolio Management Integration Pack for Primavera P6 and JD Edwards EnterpriseOne brings together the first true Enterprise PPM solution. This pre-built integration combines Primavera’s best in class work management application with JD Edwards EnterpriseOne’s best in class financial management solution in a configurable application designed to meet the unique requirements of your organization.

End-to-End Project Portfolio Management Business Process

According to the Standish Group International, approximately 71% of all IT projects fail to meet expectations of time, cost, or quality. In addition, core PPM solutions have traditionally operated in silos separate from other key enterprise processes. The Oracle Project Portfolio Management Integration Pack for Primavera P6 and JD Edwards EnterpriseOne removes the silos that separate traditional PPM and ERP systems while improving your project success rate. Now you can manage your full project lifecycles by aligning your back-office budgets and costs with project operations to ensure accurate forecasting of costs, resources and schedules.

The Process Integration Pack (PIP) is pre-built using process integration best practices. The PIP will provide enterprises with the foundation to support integrated project based business processes thus eliminating the need for duplicate data entry and lowering the chance of errors and the risk to your projects.

Leverage the Best That Oracle Projects Has To Offer

By adding Primavera's leading PPM solution to JD Edwards EnterpriseOne Project Costing we have created a complete end-to-end project management solution including financial, resource and schedule management.

Ultimate Flexibility of Data Integration

The Oracle PPM Integration Pack for Primavera P6 and JD Edwards EnterpriseOne has been designed to give you complete control over how and when your data is synchronized between the applications. By leveraging the technology of the AIA architecture we provide an intuitive and adaptable interface between Primavera P6 and Oracle JD Edwards EnterpriseOne Project Costing.

To ensure data consistency between the applications the PIP will control which system serves as the master for data. Global information regarding calendars, resources, rates and financial cost will be controlled by JD Edwards EnterpriseOne. Primavera P6 will control the schedule and the resource assignments. This ensures that both systems are fully utilizing their strengths while leveraging the strength of the other application.

Another key feature in the Oracle PPM Integration Pack for Primavera P6 and JD Edwards EnterpriseOne is the flexibility to choose where you want to create your projects. The PIP has provided the ability to create a project in either application and gather the relevant details to establish the project in the other application. This provides the ultimate flexibility in your business process to support your specific requirements.

Oracle PPM Integration Pack for Primavera P6 and JD Edwards EnterpriseOne helps reduce the time it takes to track employee time. In Primavera P6 timesheets are used to track both project and non-project time. These timesheets are brought into JD Edwards to both properly pay the employees as well as to show the full labor cost on projects, thus saving time and cost since employees only need to enter their time in one place.

Finally, the Oracle PPM Integration Pack for Primavera P6 and JD Edwards EnterpriseOne provides you with options as to when you want to synchronize your data. Some projects may require more frequent updates due to higher visibility to the organization and others may not require synchronization but once a month. With the provided controls you will have the ability to schedule the frequency of when a project is synchronized so that your data is available when and where it is needed.

Future Proof Your Investment With Oracle

The cost to retain resources to build and maintain a custom integration can really add up over time and become a burden as the Oracle applications are changed. By investing in the Oracle PPM Integration Pack for Primavera P6 and JD Edwards EnterpriseOne you are future proofing your integration through any future upgrades and thus eliminating continuous rework as the applications continue to be enhanced. You can keep the total cost of building, supporting and maintaining your integration to a minimum by choosing the Oracle PPM Integration Pack without having to add or retain additional resources to do so.

RELATED PRODUCTS

By integrating Oracle's Primavera project portfolio management applications with Oracle's JD Edwards EnterpriseOne solutions, the Oracle PPM Integration Pack makes forecasting schedules, costs, and resource usage easy for all members of a project team. As a result, project managers are able to make better-informed decisions, ensuring that an organization's projects remain constantly aligned with its business objectives.
