

DATASHEET: JD Edwards EnterpriseOne Integration to Primavera Contract Management

The integration between Primavera Contract Management and JD Edwards EnterpriseOne bridges the gap between ERP and construction project management to deliver an end-to-end solution enabling organizations to follow organizational best practices for budgeting, subcontractor, change and issue management and expedite payments.

BENEFITS

- Delivers single version of the truth about organization's projects
- Overcomes fragmented business processes
- Provides lower cost of ownership of the integration
- Simplifies upgrading to new versions

Enterprise-class solution

The JD Edwards EnterpriseOne integration to Primavera Contract Management helps organizations achieve:

- Absolute alignment between organizational strategy, project execution, and results
- Clear oversight of project costs and financial management
- Governance over project-related decisions
- Single version of the truth about the organization's projects and subcontracts

Key integration FEATURES:

To optimize profits, organizations seek solutions that streamline their key project-based business processes. The JD Edwards EnterpriseOne integration to Primavera Contract Management provides this solution through the following functionalities:

- Customize how information is shared between Primavera Contract Management and JD Edwards EnterpriseOne
- Synchronize project information, project cost codes and budgets
- Synchronize Purchase Orders
- Synchronize Changes Requests between systems
- Send Request for Progress Payments
- Send Requisition Payment Confirmation

Customize how information is shared between systems. There are numerous options for customizing how information is shared between Primavera Contract Management and JD Edwards EnterpriseOne. This enables organizations to match the integration options to their unique business processes, determine which applications “own” different types of project data, and specify which projects are synchronized and how often that synchronization takes place. Organizations may synchronize as often as needed, depending on the nature of their business and how mission critical various projects are.

Synchronize project information, project cost codes and budgets. This integration process ensures that project managers using Primavera Contract Management are always working from the most up-to-date project information before they perform activities.

Synchronize purchase orders. This process synchronizes purchase orders created in Primavera Contract Management JD Edwards EnterpriseOne. This information is created as a Contract Commitment in Primavera Contract Management.

Synchronize change requests. This process synchronizes requests to change both projects as well as purchase orders. This process improves operational efficiencies by allowing parties in different parts of the organization to make change requests.

Send request for progress payments. Project managers at the job site will know when purchase orders or subcontractors will need to get paid. The Request for Progress Payment process synchronizes progress payments by line from Primavera Contract Management to JD Edwards EnterpriseOne. Once received in JD Edwards EnterpriseOne, an Account Payable voucher is automatically created, thus streamlining the payment process.

Send requisition payment confirmation. This process synchronizes the check number from JD Edwards EnterpriseOne with the Requisition number from Primavera Contract Management. This provides auditability across the enterprise that payments to procured items and services have been made.

Key integration BENEFITS

The integration of Primavera Contract Management and JD Edwards EnterpriseOne:

- Delivers a single version of the truth about the organizations projects
 - Eliminates inconsistency in project-related reporting from financial and project management systems
 - End-to-end change management ensures all stakeholders are aware of changes to both projects and purchase orders
 - Reduces project risk with stakeholders making decisions with the same information
- Overcomes fragmented business processes across applications and departments
 - Participants use the application that makes sense for their role in the organization and within projects, while information flows freely across applications
- Provides rapid time to value and lower total cost of ownership of the integration
 - Simplify with a standardized global business platform
 - Eliminate the need to manage and maintain custom integrations
