

Oracle User Productivity Kit

Drastically Reduce Project Hours and Ensure the Right Software Solution and Seamless User Adoption

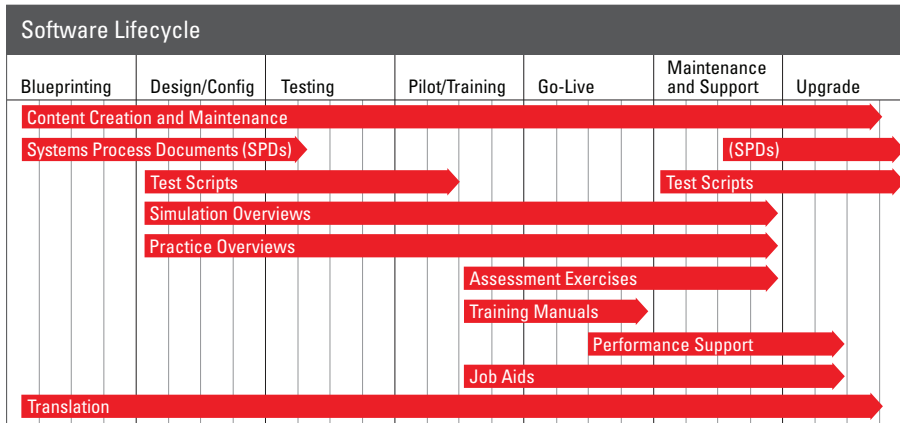

Oracle User Productivity Kit (UPK) automatically creates your project collateral and keeps it synchronized. A simple recording of your project flows eliminates the need to spend countless hours writing complex process flows, test scripts, and training documents. The recording shifts the paradigm from reading to seeing and hearing, ensuring comprehension of the software solution being designed or deployed. This eliminates rework, reduces the project timeline, and ensures seamless user adoption.

Oracle UPK enables just-in-time learning and provides an embedded GPS for users needing assistance. This helps get stake-holders, users, and decision-makers informed and onboard, and helps manage and control variables including timeline, budget, and scope.

Oracle UPK provides insight and perspective throughout the project lifecycle.

See Where Projects Start, Where They're Supposed to Go, and Where They're Heading

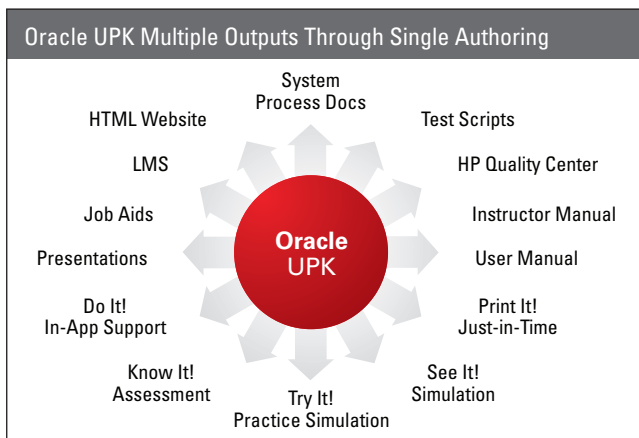

Oracle UPK improves user productivity, mitigates risk, and provides value throughout all phases of the software lifecycle.

Oracle User Productivity Kit Delivers:

- Effective user adoption—by ensuring the right solution design
- Better execution—with lowered development time, testing time, and training costs
- Continual improvement—with greater productivity and knowledge management, and lower onboarding time and support costs

Project teams can save thousands of hours through automation, greater visibility into the process, and early access to solutions.

Initiate Multipoint Communications Through a Single Authoring Session

You can dramatically reduce content development time and costs by creating and updating all the materials needed for a software project initiative through a single authoring or editing session—including system process documents, test scripts, simulations, instructor and student manuals, job aids, and in-application performance support.
