

**XENA**  
Primavera Configuration Utility

**Keep your Primavera tool efficient  
and your users more productive.**

## Every Primavera Enterprise Implementation Needs this Tool!!!

**Help for the corporate P6 Administrator has arrived!!** You've spent thousands of dollars designing and implementing your Enterprise Primavera solution – protect that investment by controlling your design configuration.

As a Primavera Administrator, are you spending hours cleaning up global structures such as activity codes, resources and calendars? **XENA** is the configuration warrior you need to help prevent these problems and to fix them when they do occur. This will keep your Primavera configuration clean and your users more productive.

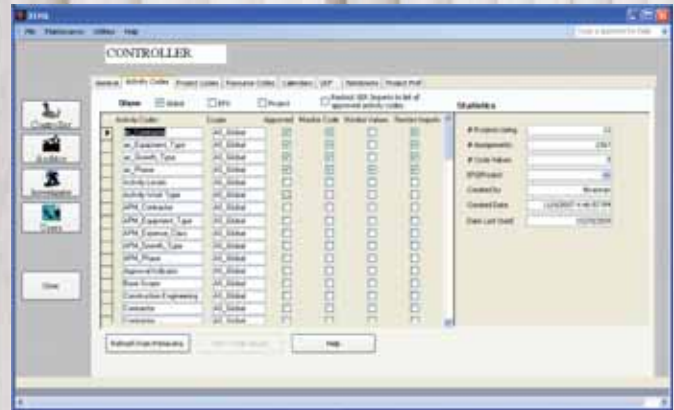

- **Users can become frustrated and confused by unorganized coding structures. Clean up your production data with XENA in minutes not days.**
- **Organize your global calendars so there are no duplicates.**
- **Know when user security settings are changed.**
- **Easily identify which users are making configuration errors so they can be prevented.**

The **XENA** Administrator is designed for Primavera Administrators and can work in conjunction with the **XENA** XER Utility. With a direct link to your production database, the **XENA** Administrator continuously monitors the enterprise configuration and alerts you when there are changes.

- **XENA Administrator will pay for itself the first week**
- **Provide real SOLUTIONS for Primavera Administrators to fix problems**
- **Gain more EFFICIENCY by Maintaining configuration control**
- **Be more PRODUCTIVE in P6 by giving users the security access they need**
- **IDENTIFY how changes are occurring and QUICKLY fix problems**
- **ENSURE reports run accurately because the right codes are being used**
- **Get REAL TIME alerts when users change or delete critical configurations**
- **Save TIME and MONEY spent on a DBA or P6 Consultant**

## Controller:

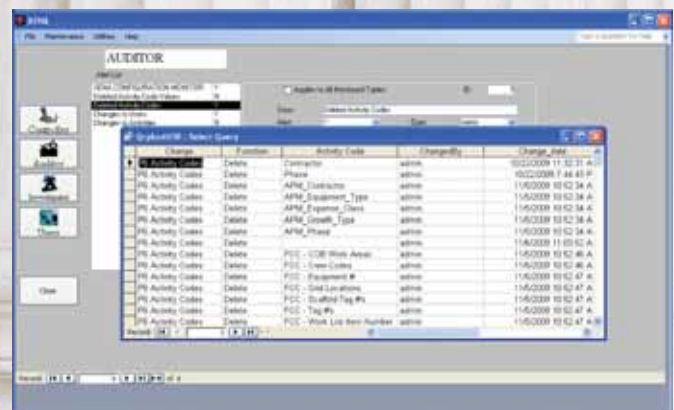

Allows you to record your approved Enterprise Configuration and monitor any changes to these P6 structures. Monitors Resources, Activity Codes, Project Codes, Resource Codes, Calendars, UDFs, Notebook Topics and Project Preferences. You may even choose to restrict XER imports of anything that is not a part of your Enterprise Configuration. Controller contains a toolbox of utilities to support the P6 Administrator's job of configuration management:

- **MERGE** – Merges duplicate codes – a HUGE time saver in eliminating duplicate activity codes and calendars.
- **BUILD XER** – Augments the XER export from P6 and builds a COMPLETE and custom configuration XER file, allowing you more control of the content.

## Auditor and Investigator:

Together these tools work to find the problems in your enterprise configuration. The Auditor, performs a periodic review of the entire monitored configuration in the Controller. When a monitored Activity Code is renamed or when an unauthorized Activity Code is added, the Auditor will alert you. The Investigator, like a police detective, searches and provides detailed facts about discovered problems. If you need to know who changed an Activity Description or when a Resource was deleted, the Investigator will find it even when others believe the trail has gone cold.

## Users:

Provides new tools for managing users and licenses. Vital information is available in reports and graphics to show user login history and license assignments. Much needed tools can simplify tasks for the P6 Administrator such as copying user configurations to other users and purging users out of the Primavera application when necessary.

- Organize users and licenses by Department and Location
- Purge users
- Copy user configurations
- View user login history
- Monitor license assignments – avoid penalties and fines for license violations
- Remove orphaned layouts and filters left behind from deleted P6 users
